1 Apresentação e Instalação

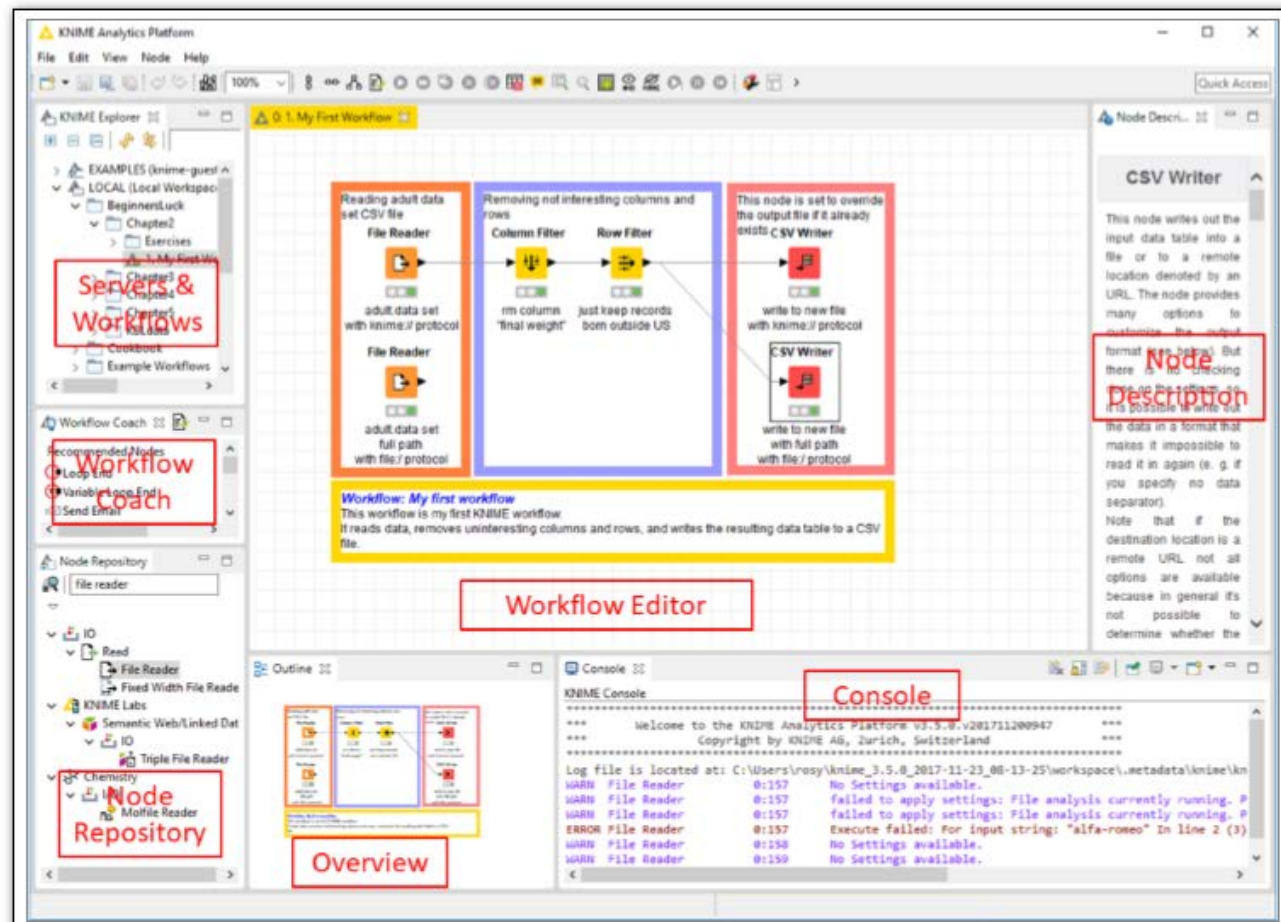

KNIME ?:

- **Flexível;**
- **Baixo Custo;**
- **Visual**
- **Fácil**
- **Extensível**

Usar KNIME para :

- **ETL**
- **Visualização de Dados**
- **Relatórios**
- **Produção (PMML)**

Workbench :

The screenshot displays the KNIME Analytics Platform Workbench interface. The main workspace shows a workflow titled "0.1. My First Workflow" with three nodes: "File Reader", "Column Filter", and "Row Filter". The "File Reader" node is highlighted with a red box and labeled "Servers & Workflows". The "Column Filter" node is highlighted with a blue box and labeled "Workflow Editor". The "Row Filter" node is highlighted with a red box and labeled "Node Description". The "CSV Writer" node is highlighted with a red box and labeled "Node Description". The "Workflow Editor" label is also present below the workflow diagram. The "Node Repository" is visible on the left side, showing a list of nodes. The "Console" window at the bottom right displays the KNIME console output, including a welcome message and error logs. The "Overview" label is located at the bottom center of the interface.

Cell type	Symbol	Remarks
Int cell	I	This represents integral numbers in the range from -2^{31} to $2^{31}-1$ (approximately 2E9).
Long cell	L	This represents larger integral numbers, and their range is from -2^{63} to $2^{63}-1$ (approximately 9E18).
Double cell	D	This represents real numbers with double (64 bit) floating point precision.
String cell	S	This represents unstructured textual information.
Date and time cell	calendar & clock	With these cells, you can store either date or time.
Boolean cell	B	This represents logical values from the Boolean algebra (true or false); note that you cannot exclude the missing value.
Xml cell	XML	This cell is ideal for structured data.
Set cell	{...}	This cell can contain multiple cells (so a collection cell type) of the same type (no duplication or order of values are preserved).
List cell	{...}	This is also a collection cell type, but this keeps the order and does not filter out the duplicates.
Unknown type cell	?	When you have different type of cells in a column (or in a collection cell), this is the generic cell type used.

1 1º WorkFlow

Atividade:

- 1 – Crie uma Workspace com knime-{login}
- 2 - Ler os dados no arquivo M01_Measurements.csv;
- 3 – Criar um novo arquivo só com Dados da BTS_01;
- 4 - Use anotações para separar as etapas;
- 5 – Export o WorkFlow.

The *knime://* protocol

<code>knime://LOCAL/</code>	refers to the current workspace location
<code>knime://LOCAL/../../knime-workspace</code>	moves two levels up from the current workspace location to a new workspace folder named knime.workspace
<code>knime://knime.workflow/</code>	refers to the current workflow location
<code>knime://knime.workflow/../../data</code>	moves two levels up from the current workflow location to a new folder named data
<code>knime://<knime-mountID>/</code>	refers to a KNIME Server available in the KNIME Explorer panel
<code>knime://<knime-mountID>/<path>/data</code>	moves to the <path>/data folder on the referenced KNIME Server

2 2º WorkFlow

Atividade:

- 1 - Ler os dados no arquivo M01_Measurements.csv;
- 2 – Criar um novo arquivo só com Dados da BTS_02;
- 3 – Criar um novo arquivo só com Dados da BTS_02 que estão a uma distância entre 0.4 e 0.5 Km.

3 3º WorkFlow

Atividade:

- 1 - Ler os dados no arquivo M01_Measurements.csv;
- 2 – Criar um novo arquivo só com Dados da BTS_04, e retirar as colunas de Latitude e Longitude;
- 3 – Escrever os dados em um arquivo csv;

4 4º WorkFlow

Atividade:

- 1 - Ler os dados no arquivo M01_Measurements.csv;
- 2 – Criar um novo arquivo só com Dados da BTS_04 e BTS_03, e retirar as colunas de Latitude e Longitude;
- 3 – Escrever os dados em um arquivo csv;

5 5º WorkFlow

Atividade:

- 1 - Ler os dados no arquivo M01_Measurements.csv;
- 2 – Criar uma Nova coluna Grupo_BTS;
- 3 – Grupo_BTS=G1 para BTS_01 e BTS_02
- 4 – Grupo_BTS=G2 para BTS_03 e BTS_04
- 5 – Escrever os dados em um arquivo csv;

6 6º WorkFlow

Atividade:

- 1 - Ler os dados no arquivo M01_Measurements.csv;
- 2 – Criar uma Nova coluna Longe
- 3 – Longe=TRUE, se $\text{dist} > 1\text{Km}$ e Longe=FALSE se $d \leq 1\text{Km}$
- 5 – Escrever os dados em um arquivo csv;

7 7º WorkFlow

Atividade:

- 1 - Ler os dados no arquivo M01_Measurements.csv;
- 2 – Criar uma Nova coluna Grupo_BTS;
- 3 – Grupo_BTS=G1 para BTS_01 e BTS_02
- 4 – Grupo_BTS=G2 para BTS_03 e BTS_04
- 5 – Escrever os dados em um arquivo csv;

8 8º WorkFlow

Atividade:

- 1 - Ler os dados no arquivo M01_Measurements.csv;
- 2 – Criar uma Nova coluna Longe
- 3 – Longe=TRUE, se $\text{dist} > 1\text{Km}$ e Longe=FALSE se $d \leq 1\text{Km}$
- 5 – Escrever os dados em um arquivo csv;

9 9º WorkFlow

Atividade:

- 1 - Ler os dados no arquivo M01_Measurements.csv;
- 2 – Calcular o PLReal Médio e seu Desvio Padrão para BTS
- 3 – Escrever o Resultado no Arquivo csv;

10 10º WorkFlow

Atividade:

- 1 - Ler os dados no arquivo M01_Measurements.csv;
- 2 – Criar nova coluna $Pot_Rec = 55.0 - PL_{real}$
- 3 – Calcular a media de Pot_Rec para cada BTS

11 11º WorkFlow

Atividade:

- 1 - Ler os dados no arquivo M01_Measurements.csv;
- 2 – Criar novo arquivo alterando “BTS” por “ERB” (nome da Coluna e valores)
- 3 – Escrever em um arquivo csv;

12 12º WorkFlow

Atividade:

- 1 - Ler os dados no arquivo M01_Measurements.csv;
- 2 – Ler os dados no arquivo M01_BTSS_Data.csv
- 3 – Escrever em um arquivo csv com dados da BTS incluído nas medições;

13 13º WorkFlow

Atividade:

- 1 - Ler os dados no arquivo M01_Measurements.csv;**
- 2 – Ler os dados no arquivo M01_BTSS_Data.csv**
- 3 – Escrever em um arquivo csv com dados da lat e lon da BTS incluídos nas medições;**

14 14º WorkFlow

Atividade:

- 1 - Ler os dados no arquivo M01_Measurements.csv;
- 2 – Filtrar Dados para BTS_01
- 2 – Fazer um Scatter Plotter do Percurso;
- 3 - Exibir mapa com Píreal temático;
